Single Sign-On

Single Sign-On is a method that allows a user to access multiple computer applications (or secure websites) by performing only one authentication.

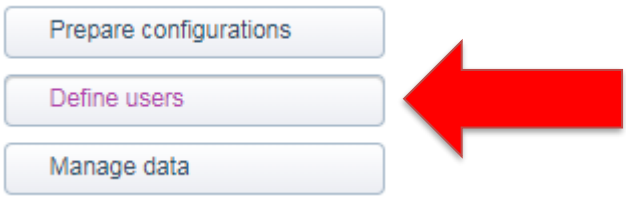

To apply **SSO** (single sign-on) to your webreporting, follow these steps:

From your SphinxOnline account:

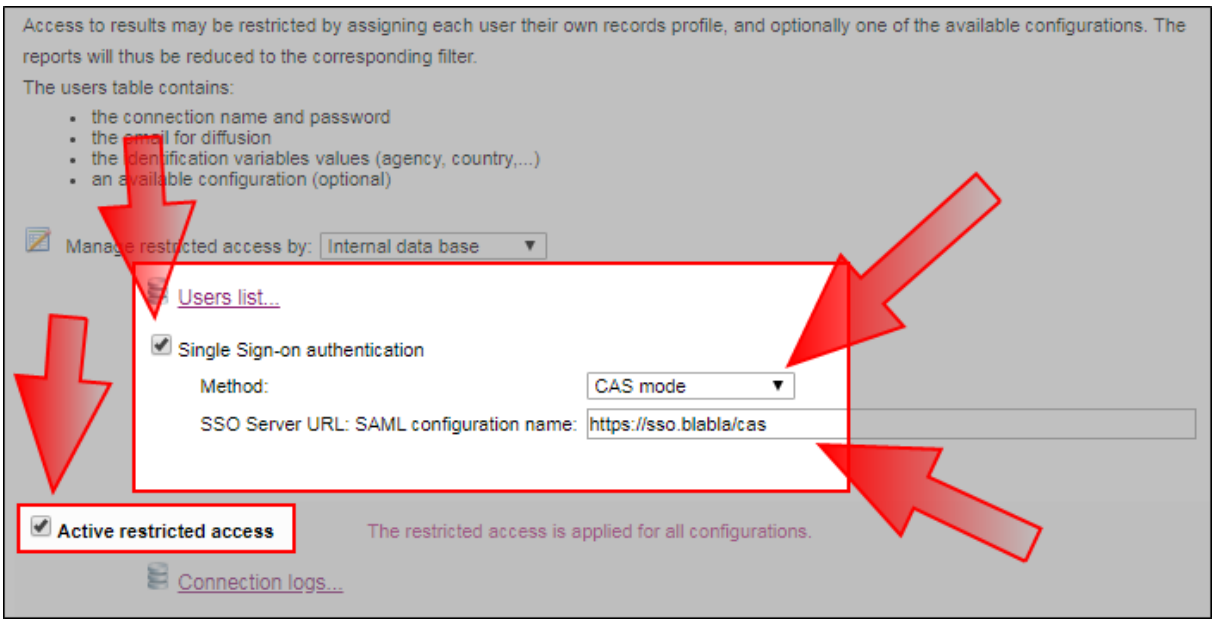

- Go to the Reporting tab

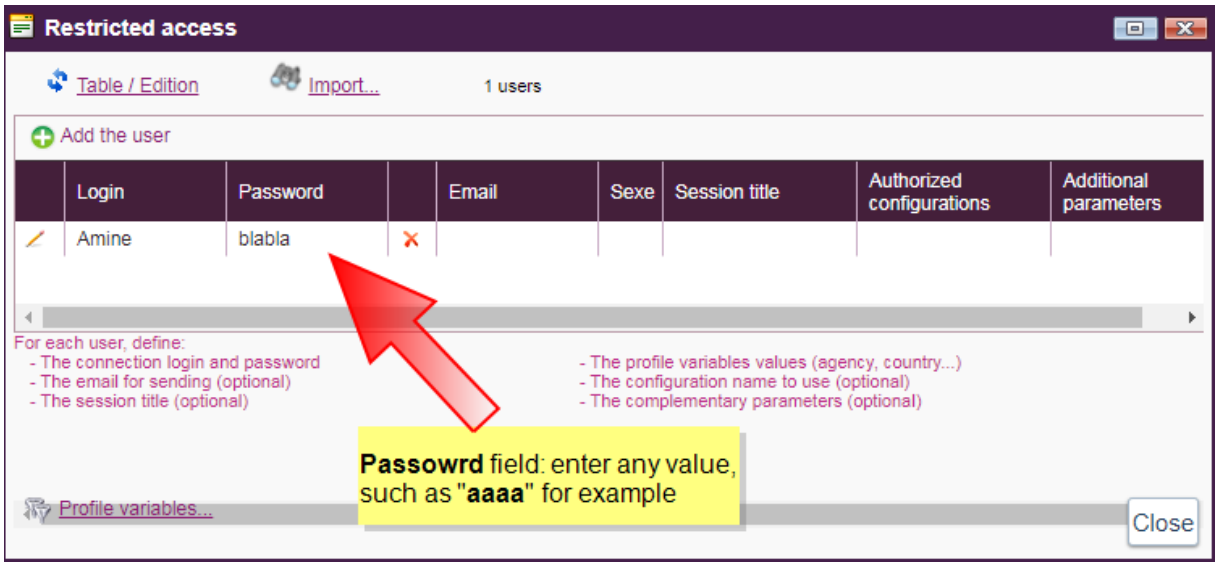

- Click « **Define users** »

- Check the « **Single Sign-On authentication** » box.
- Select the method to use : « **CAS mode** » or « **Lemon LDAP Proxy** »
- For the « **Mode CAS** » method, you must specify the "**SSO Server URL**"
  If you would like to use the SAML 2.0 method, please contact us at hotline@lesphinx.eu. (Available only on our dedicated hosting packages)

- Check the box « **active restricted access** »
- Click on « **users list** »

- Add the IDs allowed to connect (field "**login**")
- **IMPORTANT**: To add users, you must fill in the "**password**" field. You can enter any value (see example above).

In case of difficulties:

Write a request to technical support via the address: hotline@lesphinx.eu
